

## **XRotor PRO 25A** **Circular ESC + Motor Mount** Brushless Electronic Speed Controller Released

### Easy Installation

Motor can be closely mounted onto the ESC, which greatly simplifies wiring and installation of the propulsion system.

*\*Note: The motor is sold separately, not included in the package.*

Easy Installation

### Popular Choice

The mount is excellently fitted to the popular 16mm (outer diameter) carbon fiber arm tube.

Popular Choice

## Excellent Protection

The integrated structure of the ESC and motor mount has excellent dustproof and splash proof protection.

Excellent Protection

## DEO Technology

The DEO (Driving Efficiency Optimization) technology implemented in the ESC has multiple advantages:

- Active braking. When reducing the throttle amount, the motor will decelerate very quickly. This feature enables pilots to more easily perform all maneuvers like sharp turns, altitude changes, and sudden braking.
  - Higher driving efficiency, longer flight time.
  - Lower ESC temperature and a more reliable operation.
- \* Different companies call this technology by different names; "SimonK" calls it "Comp\_PWM", "BLHeli" calls it "Dampening-light" and Kontronik calls it "Active Freewheeling".

Rapider throttle response

Higher efficiency longer flight time

Lower temperature

## Easy to Use

Highly intelligent and adaptive default settings like auto-adjusting timing for ease of operation.

Easy to Use

## Compatibility

Compatible with various flight-control systems and supports a throttle signal frequency of up to 621Hz.

Compatibility

Green LED navigation light

Red LED navigation light

Safer (Night) Flightz

## Safer (Night) Flightz

The high-visibility Red/Green navigation LED position on the ESC saves you the trouble of mounting any extra LEDs.
