

CNC cut bracket for
KAVAN Go servos

The image shows a white model airplane fuselage with a servo tray installed. The tray is a CNC cut bracket for KAVAN Go servos, which is a white plastic component that fits into the fuselage. The tray is shown in two positions: one where it is installed in the fuselage and another where it is removed and lying next to it. The fuselage has a silver propeller and a black motor at the front. The background is a solid light blue color.

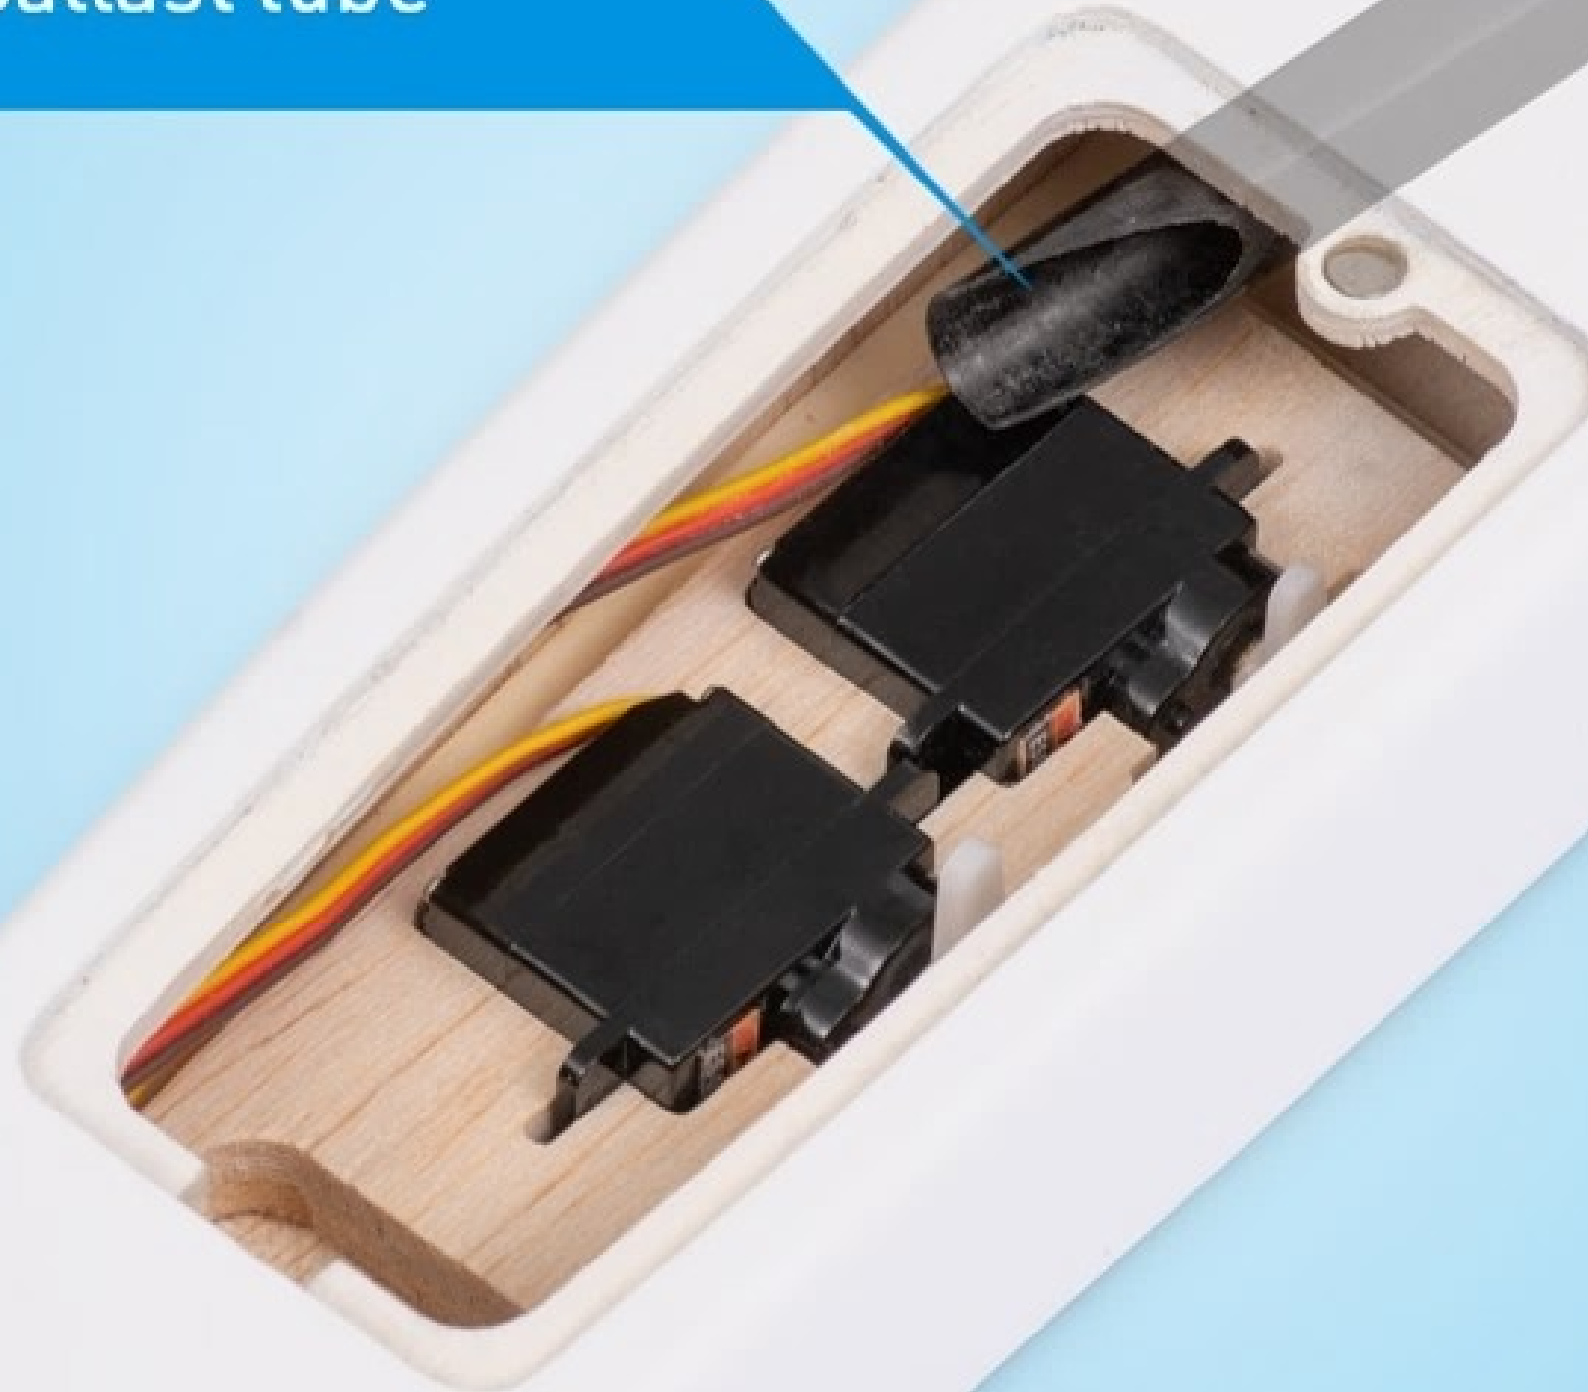

Two part aerodynamic brake
for undisturbed airflow
