

TRACK MAGIC -

Cleans track – keeps your trains running smoothly.

Abrasive track rubbers tend to leave rubbery crumbs behind which cause trouble on the railhead points and crossings.

Enter **Track Magic**, a cleverly formulated solution that cuts through the clingy cocktail of oil and dust, taking it up into the absorbent pad and minimising re-contamination of the railhead.

In this article **Nick Duxfield** shows you how to make your track work like magic!

Deluxe Materials **Track Magic** pack contents: 50ml bottle of **Track Magic**, beaker, pipette, swab and brush.

Dirty track... Not good! It needs the **Track Magic** treatment.

Transfer **Track Magic** into the beaker.

Tip: Keep the bottle in a mug to avoid spillages.

Use the pipette to dispense about a millilitre of **Track Magic** onto the swab to moisten.

Rub swab lightly along the railhead.

The railhead is now clean.

At intervals the swab may need cleaning. To clean swab apply a little solvent and blot dry with clean tissue.

The flexible swab making a simple job of cleaning in confined spaces.

Using the brush with a little **Track Magic** to clean points contacts.

Using the brush with **Track Magic** to clean loco wheels.

Track Magic leaves no slippery residues and prevents wheel spin on locos hauling heavy trains.

Running lights stay on and without flicker.

The science behind Track Magic

Untreated

Treated with **Track Magic**

Anti corrosion test proves effectiveness of **Track Magic** invisible conductive film after two weeks salt water immersion.
